## DERMA MCC F-H

**Naphthalene sulphonic acid sodium salt syntan**

### CHARACTERISTIC

---

<b>Appereance</b>	Light brownish powder.
<b>pH(10%sol.)</b>	4.5+-0,5
<b>Active matter</b>	96+-4%
<b>Shelf life</b>	Up to 12 months when properly stored.

### PROPERTIES

---

\***Derma MCC F-H** is a syntan with high dispersing capacity towards vegetable extracts, capable of improving and increasing their penetration and fixation during the drum fast tanning operation.

\***Derma MCC F-H** is also used as a pre-tanning agent for the pit tanning of sole leather because it will avoid extra grain loading of the vegetable extracts.

\***Derma MCC F-H** is a syntan that is widely used as a dispersing agent of other syntans or resins, improving their distribution and penetration.

\***Derma MCC F-H** is also used for the production of light weight and thin substance articles giving round and mellow leather enhancing the softness.

\***Derma MCC F-H** enhance the smooth and fine grain pattern of aniline leathers and has the property of shining while polished for burnished or glazed effects.

### APPLICATIONS

---

A main application of Derma MCC F-H is the uniform dispersion, thru the leather inner layers, of acid and direct dyestuffs improving their yield usage.

### PACKAGING

---

Plastic drums of 60 and 120 kgs

---
