DERMA MCC-SCK-H

CHARACTERISTIC

Apperance	Ivory beige powder
Active matter	96% minimum
Ph(10 % SOL.)	3.8+/-0,5
Shelf life	Up to 12 months when properly stored

PROPERTIES

***Derma MCC-SCK-H** is a phenol syntan with a good tanning power and with medium astringency which gives fullness, roundness and tight grain.

* **Derma MCC-SCK-H** is properly used for the crusting operation of nubuck and suede items because it gives very compact and standing fibers that are easily and evenly buffed. The softness of the items re-tanned with **Derma MCC-SCK-H** is not affected because the product has got a linear molecule.

***Derma MCC-SCK-H** has a very good dispersing action toward the dyestuffs and it may be used for the production of light and pastel shades with good fastness requirements.

***Derma MCC-SCK-H** is also used in pre-tanning and tanning bath, increasing the penetration and fixation of the other tanning material improving the tanning degree. For these properties, it is suggested in conjunction with the vegetable extracts when a light color article is requested.

APPLICATIONS

PACKAGING

Plastic drums of 60 and 120 kgs
