DERMA MCP-TR-H

CHARACTERISTIC

Apperance	Yellowish liquid
Active matter	32+/-3
Ph (10%sol.)	10+/- 1
Solubility	Very good
Shelf life	Up to months when properly stored

PROPERTIES

***Derma MCP-TR-H** is a tanning polymer that forms a special bond with the leather fibers having the capacity to achieve medium-high shrinkage temperature to the leathers treated with.

***Derma MCP-TR-H** applied in chrome tanning and/or re-tanning bath improves the chrome fixation giving leathers that are fuller, tigher and with a rubbery and silky handle.

* **Derma MCP-TR-H** applied after neutralization penetrate and glue the very empty and loose areas giving full and compact leathers that are easily filled up by the combined action of our other products. Also , **Derma MCP-TR-H** applied as a normal re-tanning agent is ideal for the production of softy nappa articles improving the tightness and softness and giving very bright and deep colours.

APPLICATIONS

DERMA MCP-TR-H is a tanning polymer which bonds with leather fibers to achieve shrinkage temperature

PACKAGING & STORAGE

Plastic drums of 60 and 120 kgs ;

DERMA MCP-TR-H has a shelf-life more than 1 year when stored between suitable conditions(5-40 Degrees Celsius) in original bags.
