## DERMA P-SOV-H

### Sulfone Based Syntan

#### CHARACTERISTIC

---

<b>Apperance</b>	Dense dark brown liquid
<b>Ph(10% sol.)</b>	4,6 +/- 0,2
<b>Active matter</b>	43 % +/- 3
<b>Shelf life</b>	Up to 12 months when properly stored.

#### PROPERTIES

---

\***Derma P-SOV-H** is a replacement syntan with high tanning power similar to those of natural vegetable extracts. **Derma P-SOV-H** imparts fullness and roundness to the leather and gives a tight and smooth grain with good burnish effect.

\***Derma P-SOV-H** imparts low astringency, has a medium light and heat fastness and may be used as a partial or total replacement for the vegetable extracts when high fastnesses are required for vegetable or semi-vegetable articles.

\***Derma P-SOV-H** is also recommended for the manufacture of articles to be dried on wet-toggle units or with low temperature vacuum dryers because it doesn't shrink during such operations maintaining the original softness and elasticity improving the area yield.

\***Derma P-SOV-H** may be used as a pre-tanning agent for the lambskins and sheepskins production of vegetable articles to improve fullness and the substance of lighter skins.

\* **Derma P-SOV-H** used in the main vegetable tannage for sole leathers, improves the penetration and dispersion of the vegetable extracts reducing their offer and improving the flobaphens solubility so to have very little residual sludge inside the pits.

#### APPLICATIONS

---

#### PACKAGING

---

Plastic drums of 60 and 120 kgs
