DERMA SOC PFH

Multipurpose Wet-End Agent

CHEMICAL COMPOSITION

Apperance	Off white powder
Ph(10% sol.)	10+/- 1
Shelf life	Up to 12 months when properly stored

PROPERTIES

***Derma SOC PFH** is a special product that has the characteristic of solubilizing and removing the dirt present on raw stock, even when dried.

***Derma SOC PFH** is also used successfully during liming thanks to his high solubilizing action upon lime salts: therefore , the amount of lime offer can be reduced and the sludge amount on the effluent treatment plant is less. The resulting hides and skins are more open, more clean and with higher fibres elasticity.

***Derma SOC PFH** is used during de-pickling because helps to open up the folds after prolonged storage and it will control the swelling of the skins giving very full skins without losing the substance.

***Derma SOC PFH** is used for the neutralization of heavy substance material because it will rise the pH without opening and emptying the fibres giving optimum buffing result, especially for patent leathers or nubuck articles.

APPLICATIONS

PACKAGING

Plastic drums of 60 and 120 kgs
